Type 1 — Purchase Invoice (Supplier Invoice)

What it is: When you raise a Purchase Order and receive goods, the supplier sends you a bill. That bill is the Purchase Invoice.

Who creates it: Admin/Manager

When: After GRN is completed

Fields needed:

- Invoice # (auto generated)
- Supplier name
- Linked PO number
- Linked GRN number
- Line items (SKU, Qty, Rate, Amount)
- Subtotal
- CGST / SGST / IGST (GST split)
- Total Amount
- Payment Terms (30/45/60 days)
- Due Date
- Status — Draft / Sent / Paid / Overdue

Where to show it: Under Inbound section → "Purchase Invoices" OR under your current Invoices page with a Type filter.

Type 2 — Sales Invoice (Customer Invoice)

What it is: When you fulfill a Sales Order and ship goods to the customer, you send them a bill. That is the Sales Invoice.

Who creates it: Admin/Manager

When: After Shipment is dispatched or delivered

Fields needed:

- Invoice # (auto generated)
- Customer name (searchable dropdown — NOT UUID)
- Linked Sales Order number
- Linked Shipment number
- Line items (SKU, Qty, Rate, Discount, Amount)
- Subtotal
- CGST / SGST / IGST
- Total
- Payment Terms

- Due Date
- Status — Draft / Sent / Paid / Overdue / Cancelled

Where to show it: Under Outbound section → "Sales Invoices" OR same Invoices page with Type filter.

Type 3 — Warehouse Service Invoice

What it is: If WMS is used by a 3PL (Third Party Logistics) company — meaning a warehouse that stores goods FOR other companies and charges them — then you need to bill those clients for storage space, handling charges, etc.

Example: "XYZ Logistics" stores goods for "ABC Brand" and charges ₹2 per unit per day for storage + ₹500 per GRN handling fee.

Fields needed:

- Client name
- Billing period (from date → to date)
- Storage charges (units × days × rate)
- Handling charges
- Value Added Services
- GST
- Total

Where to show: Same Invoices page, Type = "Service Invoice"

Here’s exactly what to change in invoice page:

• Add a **Type** field — Purchase Invoice / Sales Invoice
• Change **Customer ID text box** to a **searchable customer dropdown** showing customer names
• Add **Supplier dropdown** for Purchase Invoices
• Add **Linked PO / Linked SO** field so invoice connects to the order
• Add **GST breakup** — CGST, SGST, IGST separately (mandatory for Indian businesses)
• Add **HSN Code** per line item (required for GST filing)
• Add **Overdue** as a status (not just Draft/Sent/Paid)
• Add **Download as PDF** button — every invoice must be printable/downloadable

Admin vs Manager for Invoices

Admin — sees all invoices across all warehouses, can create both purchase and sales invoices.
Manager — sees only invoices related to their warehouse's POs and SOs.
