1. MANAGER DASHBOARD

Section 1 — Header (Top of page)

Warehouse name prominently displayed:

Hyderabad Logistics Hub
Bonded Warehouse | Active | 35,000 units capacity

Today's date + shift indicator:

Monday, March 30, 2026 | Morning Shift | 9:00 AM - 6:00 PM

Quick action buttons (top right):

- Create Task
- Create GRN
- Create Pick List
- View My Workers

These quick actions are the most common things a manager does daily. Put them right at the top so they don't have to navigate anywhere.

Section 2 — today’s KPI Cards (8 cards, 4x2 grid)

These are all scoped to this warehouse only:

Card	What It Shows
Orders to Ship Today	SOs that must be dispatched today
Pending GRNs	Supplier deliveries waiting to be processed
Active Workers	Workers currently logged in and working
Pending Tasks	Tasks not yet assigned or started
Low Stock Items	SKUs below reorder point in this warehouse
Expiring This Week	Batches expiring in next 7 days
Pending QC	Items waiting quality inspection
Pending Putaway	Items received but not yet put to bins

Why these 8: These are the 8 things a warehouse manager checks first thing every morning. If any of these are non-zero they need immediate attention.

Section 3 — Worker Activity Panel (Most Important for Manager)

This section doesn't exist in Admin dashboard. It's unique to Manager.

Title: My Team — Today's Activity

Shows a card per worker assigned to this warehouse:

[Avatar] Ramesh Kumar Status: Active
Worker | Zone B
Current Task: Pick List PL-045
Progress: 8/12 items picked
Last Activity: 2 mins ago

[Avatar] Amit Patel Status: Active
Worker | Zone C
Current Task: Putaway PUT-023
Progress: In Progress
Last Activity: 5 mins ago

[Avatar] Priya Sharma Status: Idle
Worker | Zone A
Current Task: None assigned
Last Activity: 14 mins ago
[+ Assign Task] ← button appears for idle workers

Why this matters: Manager can instantly see who is busy, who is idle, and assign work immediately. In Admin dashboard this level of per-worker detail per warehouse is too granular.

Stats row below worker cards:

- Total Workers Today: 3
- Active: 2
- Idle: 1
- On Break: 0
- Absent: 0

Section 4 — Inbound Pipeline (Scoped to This Warehouse)

Same pipeline as admin but ONLY this warehouse's data:

Purchase Orders → GRN → QC → Putaway

Stage	Count	Urgent
POs Approved (awaiting delivery)	3	1 urgent
GRNs Pending processing	2	0
QC Inspections pending	1	1 urgent
Putaway pending	4	0

Urgent items highlighted in red. Manager clicks on any stage and goes directly to that module filtered to their warehouse.

Section 5 — Outbound Pipeline (Scoped to This Warehouse)

Sales Orders → Pick → Pack → Ship

Stage	Count	Due Today
Orders Confirmed	8	3 due today
Pick Lists Active	2	—
Packing Station	1	—
Ready to Ship	2	2 must go today
In Transit	5	—

"Due Today" column is critical for manager — they need to know exactly what must leave the warehouse today. This column doesn't matter as much at admin level.

Section 6 — Today's Task Board

Title: Today's Operations

This is a Kanban-style board or table showing ALL tasks for this warehouse today:

Task #	Type	Assigned To	Priority	Status	Due
TSK-041	Pick	Ramesh	High	In Progress	11:00 AM
TSK-042	Putaway	Amit	Medium	Pending	12:00 PM
TSK-043	Pack	Unassigned	High	Pending	10:30 AM
TSK-044	Transfer	Priya	Low	Pending	3:00 PM

TSK-043 is highlighted red — High priority, unassigned, due in 30 mins. Manager must act immediately.

+ Create Task button right on this section — not just at the top.

Section 7 — Inventory Alerts (This Warehouse Only)

Three alert categories:

Critical (needs action today):

- SKU-007 Oil 1L — ZERO stock. Reorder immediately.
- Batch B-023 Milk Powder — Expires in 2 days. Move or dispose.

Warning (needs attention this week):

- SKU-002 Sugar 10kg — Below reorder point (45 units, min 100)
- SKU-015 Wheat Flour — Overstock (2400 units, max 2000)

Info (monitor):

- 3 batches expiring in 30 days
- Zone B utilization at 78% — getting full

Manager clicks any alert → goes directly to relevant page with filter applied.

Section 8 — Zone Utilization (This Warehouse Only)

Same zone overview as admin but focused on THIS warehouse's zones only. No N/A zones. Clean and relevant.

Visual bar per zone:

Zone A (Receiving) 42%
Zone B (Storage) 78% Getting Full
Zone C (Picking) 51%
Zone D (Shipping) 23%

Section 9 — Today's Shipments (Unique to Manager)

Title: Departures Today

Table of all shipments scheduled to go out today:

Order #	Customer	Items	Carrier	Vehicle	Departure	Status
SO-041	Raj Traders	12 items	Blue Dart	MH-01-AB-1234	11:00 AM	Ready ✓
SO-045	Kumar & Co	8 items	DTDC	—	2:00 PM	Packing
SO-047	Sri Stores	23 items	Self	TN-09-CD-5678	4:00 PM	Picking

This section is critical for managers — they need to know exactly what's leaving today and whether it's on track.

Section 10 — Recent Activity Feed (Bottom of Page)

Live feed of everything happening in the warehouse:

2 mins ago — Ramesh picked 8 items for SO-041
5 mins ago — GRN-023 received from Supplier ABC (45 units)
12 mins ago — QC passed for GRN-022, 120 units
18 mins ago — Amit completed Putaway PUT-019
25 mins ago — SO-039 dispatched via Blue Dart
1 hour ago — Priya created stock adjustment ADJ-007
Manager can see exactly what happened in their warehouse in the last few hours without asking anyone.
